## Contents

1 Introduction ................................................................. 1  
  1.1 Magnetism: Magical yet Practical ................................. 1  
  1.2 History of Magnetism .................................................. 3  
  1.3 Magnetism, Neutrons, Polarized Electrons and X-rays ........... 12  
    1.3.1 Spin Polarized Electrons and Magnetism ..................... 15  
    1.3.2 Polarized X-Rays and Magnetism ............................. 22  
  1.4 Developments in the Second Half of the 20th Century .......... 26  
  1.5 Some Thoughts about the Future .................................. 30  
  1.6 About the Present Book ............................................ 32

Part I Fields and Moments

2 Electric Fields, Currents and Magnetic Fields ..................... 41  
  2.1 Signs and Units in Magnetism ............................... 41  
  2.2 The Electric Field ................................................. 41  
  2.3 The Electric Current and its Magnetic Field ................. 42  
  2.4 High Current Densities .......................................... 47  
  2.5 Magnetic and Electric Fields inside Materials ............... 49  
  2.6 The Relation of the Three Magnetic Vectors in Magnetic  
      Materials ......................................................... 51  
    2.6.1 Stray and Demagnetizing Fields of Thin Films ............ 54  
    2.6.2 Applications of Stray and Demagnetizing Fields .......... 56  
  2.7 Symmetry Properties of Electric and Magnetic Fields ........ 59  
    2.7.1 Parity ......................................................... 59  
    2.7.2 Time Reversal ................................................. 61

3 Magnetic Moments and their Interactions with Magnetic  
   Fields ................................................................. 63  
  3.1 The Classical Definition of the Magnetic Moment .............. 63  
  3.2 From Classical to Quantum Mechanical Magnetic Moments .... 66  
    3.2.1 The Bohr Magneton ......................................... 67  
    3.2.2 Spin and Orbital Magnetic Moments ......................... 68  
  3.3 Magnetic Dipole Moments in an External Magnetic Field ....... 70  
  3.4 The Energy of a Magnetic Dipole in a Magnetic Field ......... 72
Part II History and Concepts of Magnetic Interactions

6 Exchange, Spin-Orbit and Zeeman Interactions ............... 171
   6.1 Overview ......................................................... 171
   6.2 The Spin Dependent Atomic Hamiltonian or Pauli Equation . 173
      6.2.1 Independent Electrons in a Central Field ............ 174
      6.2.2 Interactions between two Particles - Symmetrization
          Postulate and Exclusion Principle ..................... 176
   6.3 The Exchange Interaction ..................................... 179
      6.3.1 Electron Exchange in Atoms ......................... 179
      6.3.2 Electron Exchange in Molecules ..................... 184
      6.3.3 Magnetism and the Chemical Bond ................. 191
      6.3.4 From Molecules to Solids ......................... 192
      6.3.5 The Heisenberg Hamiltonian ....................... 194
      6.3.6 The Hubbard Hamiltonian ......................... 197
      6.3.7 Heisenberg and Hubbard Models for H₂ ............. 199
      6.3.8 Summary and Some General Rules for Electron
          Exchange .................................................. 206
   6.4 The Spin-Orbit Interaction ................................... 207
      6.4.1 Fine Structure in Atomic Spectra .................. 207
      6.4.2 Semiclassical Model for the Spin-Orbit Interaction .... 209
      6.4.3 The Spin-Orbit Hamiltonian ....................... 210
      6.4.4 Importance of the Spin-Orbit Interaction .......... 213
   6.5 Hund’s Rules .................................................. 214
   6.6 The Zeeman Interaction ....................................... 216
      6.6.1 History and Theory of the Zeeman Effect ........... 216
      6.6.2 Zeeman versus Exchange Splitting of Electronic States 222
      6.6.3 Importance of the Zeeman Interaction .......... 224

7 Electronic and Magnetic Interactions in Solids .......... 227
   7.1 Chapter Overview .............................................. 227
   7.2 Localized versus Itinerant Magnetism: The Role of the
       Centrifugal Potential ...................................... 229
   7.3 The Relative Size of Interactions in Solids .......... 236
   7.4 The Band Model of Ferromagnetism ...................... 240
      7.4.1 The Puzzle of the Broken Bohr Magneton Numbers . 240
      7.4.2 The Stoner Model ..................................... 242
      7.4.3 Origin of Band Structure ......................... 246
      7.4.4 Density-Functional Theory ......................... 249
   7.5 Ligand Field Theory .......................................... 252
      7.5.1 Independent-Electron Ligand Field Theory .......... 254
Part III Polarized Electron and X-Ray Techniques

8 Polarized Electrons and Magnetism

8.1 Introduction

8.2 Generation of Spin Polarized Electron Beams

8.2.1 Separation of the Two Spin States

8.2.2 The GaAs Spin-Polarized Electron Source

8.3 Spin Polarized Electrons and Magnetic Materials: Overview of Experiments

8.4 Formal Description of Spin Polarized Electrons

8.4.1 Quantum Behavior of the Spin

8.4.2 Single Electron Polarization in the Pauli Spinor Formalism

8.4.3 Description of a Spin Polarized Electron Beam

8.5 Description of Spin Analyzers and Filters

8.5.1 Incident Beam Polarization: Spin Analyzer

8.5.2 Transmitted Beam Polarization: Spin Filter

8.5.3 Determination of Analyzer Parameters

8.6 Interactions of Polarized Electrons with Materials

8.6.1 Beam Transmission through a Spin Filter

8.6.2 The Fundamental Interactions of a Spin Polarized Beam with Matter
8.6.3 Interaction of Polarized Electrons with Magnetic Materials: Poincaré's Sphere ......................... 345
8.7 Link Between Electron Polarization and Photon Polarization .... 350
  8.7.1 Photon Polarization in the Vector Field Representation .... 351
  8.7.2 Photon Polarization in the Spinor Representation ..... 352
  8.7.3 Transmission of Polarized Photons through Magnetic Materials: Poincaré Formalism .................. 353
  8.7.4 X-Ray Faraday Effect and Poincaré Formalism .......... 356
  8.7.5 Poincaré and Stokes Formalism ....................... 358

9 Interactions of Polarized Photons with Matter ............ 359
  9.1 Overview .................................................. 359
  9.2 Terminology of Polarization Dependent Effects ........ 360
  9.3 Semi-Classical Treatment of X-Ray Scattering by Charges and Spins ........................................ 363
    9.3.1 Scattering by a Single Electron ....................... 363
    9.3.2 Scattering by an Atom .................................. 368
  9.4 Semi-Classical Treatment of Resonant Interactions ...... 369
    9.4.1 X-ray Absorption ...................................... 369
    9.4.2 Resonant Scattering ................................... 372
    9.4.3 Correspondence between Resonant Scattering and Absorption ............................................. 376
    9.4.4 The Kramers-Kronig Relations ......................... 377
  9.5 Quantum-Theoretical Concepts ............................ 378
    9.5.1 One-Electron and Configuration Pictures of X-Ray Absorption ............................................. 378
    9.5.2 Fermi’s Golden Rule and Kramers-Heisenberg Relation 380
    9.5.3 Resonant Processes in the Electric Dipole Approximation ................................................. 382
    9.5.4 The Polarization Dependent Dipole Operator ....... 384
    9.5.5 The Atomic Transition Matrix Element ............... 386
    9.5.6 Transition Matrix Element for Atoms in Solids .... 390
  9.6 The Orientation-Averaged Intensity: Charge and Magnetic Moment Sum Rules ................................ 393
    9.6.1 The Orientation-Averaged Resonance Intensity ....... 394
    9.6.2 Derivation of the Intensity Sum Rule for the Charge . 395
    9.6.3 Origin of the XMCD Effect ............................. 398
    9.6.4 Two-Step Model for the XMCD Intensity ............ 402
    9.6.5 The Orientation Averaged Sum Rules ................. 406
  9.7 The Orientation-Dependent Intensity: Charge and Magnetic Moment Anisotropies .......................... 410
    9.7.1 Concepts of Linear Dichroism ......................... 410
    9.7.2 X-Ray Natural Linear Dichroism ...................... 411
    9.7.3 Theory of X-Ray Natural Linear Dichroism .......... 412
    9.7.4 XNLD and Quadrupole Moment of the Charge ....... 415
10 X-Rays and Magnetism: Spectroscopy and Microscopy . . . 439
10.1 Introduction ................................................. 439
10.2 Overview of Different Types of X-Ray Dichroism .......... 440
10.3 Experimental Concepts of X-Ray Absorption Spectroscopy . 445
10.3.1 General Concepts ........................................... 445
10.3.2 Experimental Arrangements ................................ 450
10.3.3 Quantitative Analysis of Experimental Absorption Spectra . 452
10.3.4 Some Important Experimental Absorption Spectra ....... 457
10.3.5 XMCD Spectra of Magnetic Atoms: From Thin Films to Isolated Atoms ........................................... 459
10.3.6 Sum Rule Analysis of XMCD Spectra: Enhanced Orbital Moments in Small Clusters ................................. 461
10.3.7 Measurement of Small Spin and Orbital Moments: Pauli Paramagnetism ................................................. 465
10.4 Magnetic Imaging with X-Rays ............................... 467
10.4.1 X-Ray Microscopy Methods ................................ 468
10.4.2 Lensless Imaging by Coherent Scattering .................. 471
10.4.3 Overview of Magnetic Imaging Results .................... 476

Part IV Properties of and Phenomena in the Ferromagnetic Metals

11 The Spontaneous Magnetization, Anisotropy, Domains . . . 489
11.1 The Spontaneous Magnetization ............................... 490
11.1.1 Temperature Dependence of the Magnetization in the Molecular Field Approximation .............................. 491
11.1.2 Curie Temperature in the Weiss-Heisenberg Model ....... 494
11.1.3 Curie Temperature in the Stoner Model .................... 498
11.1.4 The Meaning of “Exchange” in the Weiss-Heisenberg and Stoner Models ................................................. 501
11.1.5 Thermal Excitations: Spin Waves .......................... 504
11.1.6 Critical Fluctuations ........................................... 509
11.2 The Magnetic Anisotropy ....................................... 514
11.2.1 The Shape Anisotropy ....................................... 516
| 11.2.2 | The Magneto-Crystalline Anisotropy | 519 |
| 11.2.3 | The Discovery of the Surface Induced Magnetic Anisotropy | 520 |
| 11.3 | The Magnetic Microstructure: Magnetic Domains and Domain Walls | 521 |
| 11.3.1 | Ferromagnetic Domains | 521 |
| 11.3.2 | Antiferromagnetic Domains | 525 |
| 11.4 | Magnetization Curves and Hysteresis Loops | 525 |
| 11.5 | Magnetism in Small Particles | 527 |
| 11.5.1 | Néel and Stoner-Wohlfarth Models | 527 |
| 11.5.2 | Thermal Stability | 530 |
| 12 | Magnetism of Metals | 531 |
| 12.1 | Overview | 531 |
| 12.2 | Band Theoretical Results for the Transition Metals | 532 |
| 12.2.1 | Basic Results for the Density of States | 533 |
| 12.2.2 | Prediction of Magnetic Properties | 534 |
| 12.3 | The Rare Earth Metals: Band Theory versus Atomic Behavior | 540 |
| 12.4 | Spectroscopic Tests of the Band Model of Ferromagnetism | 544 |
| 12.4.1 | Spin Resolved Inverse Photoemission | 545 |
| 12.4.2 | Spin Resolved Photoemission | 549 |
| 12.5 | Resistivity of Transition Metals | 558 |
| 12.5.1 | Conduction in Non-Magnetic Metals | 559 |
| 12.5.2 | The Two Current Model | 563 |
| 12.5.3 | Anisotropic Magnetoresistance of Metals | 566 |
| 12.6 | Spin Conserving Electron Transitions in Metals | 568 |
| 12.6.1 | Spin Conserving Transitions and the Photoemission Mean Free Path | 568 |
| 12.6.2 | Determination of the Spin-Dependent Mean Free Path using the Magnetic Tunnel Transistor | 571 |
| 12.6.3 | Probability of Spin-Conserving relative to Spin-Non-Conserving Transitions | 574 |
| 12.6.4 | The Complete Spin-Polarized Transmission Experiment | 578 |
| 12.7 | Transitions Between Opposite Spin States in Metals | 583 |
| 12.7.1 | Classification of Transitions Between Opposite Spin States | 583 |
| 12.7.2 | The Detection of Transitions between Opposite Spin States | 585 |
| 12.8 | Remaining Challenges | 592 |

Part V Topics in Contemporary Magnetism
13 Surfaces and Interfaces of Ferromagnetic Metals .......................... 597
  13.1 Overview ............................................................................. 597
  13.2 Spin-Polarized Electron Emission from Ferromagnetic Metals 598
    13.2.1 Electron Emission into Vacuum ................................ 598
    13.2.2 Spin-Polarized Electron Tunnelling between Solids .......... 603
    13.2.3 Spin-Polarized Electron Tunnelling Microscopy .............. 608
  13.3 Reflection of Electrons from a Ferromagnetic Surface .......... 611
    13.3.1 Simple Reflection Experiments .................................... 613
    13.3.2 The Complete Reflection Experiment ............................ 618
  13.4 Static Magnetic Coupling at Interfaces .............................. 623
    13.4.1 Magneto-Static Coupling ............................................ 624
    13.4.2 Direct Coupling between Magnetic Layers .................... 625
    13.4.3 Exchange Bias ............................................................ 627
    13.4.4 Induced Magnetism in Paramagnets and Diamagnets ....... 639
    13.4.5 Coupling of Two Ferromagnets across a Non-Magnetic Spacer Layer ......................................................... 642

14 Electron and Spin Transport .................................................. 647
  14.1 Currents across Interfaces between a Ferromagnet and a Non-Magnet .............................................................. 647
    14.1.1 The Spin Accumulation Voltage in a Transparent Metallic Contact .............................................................. 647
    14.1.2 Decay of the Spin Accumulation Potential away from the Interface .......................................................... 651
    14.1.3 The Diffusion Equation for the Spins ......................... 652
    14.1.4 Giant Magneto-Resistance (GMR) .............................. 655
    14.1.5 Measurement of Spin Diffusion Lengths ................... 659
    14.1.6 Typical Values of Spin Accumulation Voltage and Boundary Resistance ....................................................... 661
  14.2 Spin-Injection into a Ferromagnet ..................................... 662
    14.2.1 Origin and Properties of Spin Injection Torques ............ 663
    14.2.2 Switching of the Magnetization with Spin Currents: Concepts ................................................................. 670
    14.2.3 Excitation and Switching of the Magnetization with Spin Currents: Experiments ............................................. 672
  14.3 Spin Currents in Metals and Semiconductors ....................... 677
  14.4 Spin based Transistors and Amplifiers ................................ 680

15 Ultrafast Magnetization Dynamics ........................................... 685
  15.1 Introduction ......................................................................... 685
  15.2 Energy and Angular Momentum Exchange between Physical Reservoirs ................................................................. 688
    15.2.1 Thermodynamic Considerations ................................ 688
    15.2.2 Quantum Mechanical Considerations: The Importance of Orbital Angular Momentum ......................... 690
